AI Essentials: *Use AI in Everyday Life*

19 scripts: a welcome video and one video per lesson, ready for camera.

19 videos | ~1.4 hours of talk time | Internal · not for customers

© 2026 Principe Consults

BEFORE YOU START

How to record

1. **Read the script once out loud** before recording. Change any phrase that doesn't sound like you. The scripts are a starting point, not a contract.
2. **Fill in the placeholders.** `[YOUR NAME]` appears in the welcome videos. `[OPTIONAL PERSONAL EXAMPLE: …]` marks the one spot per video where a short story of your own would help. Skip it if you don't have one. Never invent one.
3. **Follow the cues.** Lines in bold brackets are directions, not words to say:
   - **[ON CAMERA]**: you, talking to the camera.
   - **[SCREEN RECORDING]**: record your screen in an AI assistant (Claude, ChatGPT, Gemini or Copilot). The prompt to paste is in the grey block that follows, copied word for word from the written lesson.
   - **[ON SCREEN TEXT: "…"]**: a title or caption to add in editing.
   - **[B-ROLL: …]**: optional cutaway footage. Fine to skip.
   - **[CUT TO …]** and **[PAUSE]**: editing and pacing notes.
4. **Timestamps are estimates** at a relaxed 140 words per minute. Live demos usually run a little longer.
5. **Record in short takes**, one section at a time, and stitch them together.
6. **Upload and add the link:** upload to YouTube (as *Unlisted*), Vimeo or Loom. In the site, go to **Admin → Courses → (course) → lesson → Video URL**. For the downloadable course apps, add the link to `deliverables/videos.json` and rebuild (see `deliverables/README.md`).

The welcome videos have no slot on the site. Send the link in your delivery email, put it at the start of Lesson 1's video, or use it on social media.

11	Lesson 11: Write and Edit Better (Without Sounding Like a Robot)	49
12	Lesson 12: Research and Summarize Documents You Can Trust	53
13	Lesson 13: Better Decisions and Brainstorming	58
14	Lesson 14: Talk, Snap & Show: Voice and Image Features	62
15	Lesson 15: Fact-Check AI in Three Minutes	66
16	Lesson 16: Safety, Ethics & What Never to Share	70
17	Lesson 17: Build Your Personal AI Toolkit	74
18	Lesson 18: Your 30-Day AI Habit Plan	78

Welcome to AI Essentials: Use AI in Everyday Life

Course	AI Essentials: Use AI in Everyday Life
Video	Course welcome
Length	2–3 min (~380 spoken words)
Format	Talking head

Goal of this video: Welcome new students, show them what they'll be able to do and how the course is organized, and send them to Lesson 1 ready to learn.

BEFORE YOU RECORD

- Replace [YOUR NAME] in the opening line with your name.
- No screen recording is needed. Find a quiet spot with good light and look straight at the camera.
- Ask your editor to prepare the five module names as a simple title card.

SCRIPT

1. Welcome · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "AI Essentials: Use AI in Everyday Life"]

Hi, I'm [YOUR NAME], and welcome to AI Essentials: Use AI in Everyday Life. AI assistants like Claude, ChatGPT and Gemini can draft your emails, plan your week and explain almost anything at your level. But only if you know how to talk to them, and when not to trust them.

This course is for complete beginners. If you can send an email or a text message, you can take this course. Everything is explained in plain English, step by step.

2. What you'll be able to do · 0:35

[ON SCREEN TEXT: "What you'll learn"]

By the end, you'll understand what AI is, how it works and why it sometimes makes things up. You'll write prompts that get great answers the first time, and you'll know how to fix the ones that don't.

You'll use AI to write messages, plan, learn, research and make decisions. And you'll build the safety habits that matter: protecting your privacy, fact-checking answers and spotting AI-powered scams.

3. How the course works · 1:05

[ON SCREEN TEXT: "Getting Started · Prompting That Works · AI for Everyday Life · AI for Work & Productivity · Make It a Habit"]

There are 18 short lessons in five modules. We begin with Getting Started, then move to Prompting That Works, where you'll learn the simple five-part prompt behind great answers. Then you'll put it to use in AI for Everyday Life and AI for Work & Productivity.

We finish with Make It a Habit, where you'll build your personal AI toolkit and a daily habit that lasts.

4. Get the most from each lesson · 1:30

[ON SCREEN TEXT: "Watch · Read · Try it now"]

Each lesson works best in three steps. Watch the video, then read the written lesson, which has the full copy-paste prompts and templates. Then do the "Try it now" exercise with your AI assistant open, because you learn this by doing.

If you're taking the course on the Principe AI website, every lesson also has an AI tutor you can ask questions.

5. What you need · 2:00

[ON SCREEN TEXT: "Claude · ChatGPT · Gemini · Microsoft Copilot"]

All you need is one of the major AI assistants, such as Claude, ChatGPT, Gemini or Microsoft Copilot. The free version is enough for every lesson, and if you don't have one yet, Lesson 3 walks you through choosing one and setting it up safely.

Tools and features change quickly, so this course focuses on the skills that carry across all of them. Giving good context, refining answers, verifying facts and protecting your privacy work with any assistant, today and in the future.

6. Let's begin · 2:35

[ON CAMERA]

So, are you ready? Head to Lesson 1, What AI Really Is (and Isn't), and let's take you from curious to confident. I'll see you there.

ON-SCREEN TEXT

- AI Essentials: Use AI in Everyday Life
- What you'll learn
- Getting Started · Prompting That Works · AI for Everyday Life · AI for Work & Productivity · Make It a Habit
- Watch · Read · Try it now
- Claude · ChatGPT · Gemini · Microsoft Copilot

LESSON PAGE DESCRIPTION

Welcome to AI Essentials, a friendly, practical course for complete beginners. Find out what you'll be able to do by the end, how the five modules fit together, and how to get the most from every lesson using any major AI assistant, including the free versions.

SCRIPT 2 OF 19 AI Essentials

Lesson 1: What AI Really Is (and Isn't)

Course	AI Essentials: Use AI in Everyday Life
Module	1 · Getting Started
Length	4–5 min (~640 spoken words)
Format	Talking head + screen recording

Goal of this video: Understand what an AI assistant actually is, what it's great at and where it falls short, using one simple mental model you can rely on for the rest of the course.

BEFORE YOU RECORD

- Open any AI assistant (Claude, ChatGPT, Gemini or Copilot) in a new chat.
- Have both dinner prompts from the written lesson ready to paste: the one-line version and the detailed version. Send the detailed one in a new chat so the answers are easy to compare.
- Ask your editor to prepare the "great at" list and the "not" list as two simple title cards.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "What AI Really Is (and Isn't)"]

If you've ever felt that everyone else "gets" AI and you somehow missed the memo, you're in good company. Here's the good news: you don't need to understand the math to use AI well.

You need one accurate mental model. By the end of this video, you'll have it.

2. What an AI assistant actually is · 0:20

[ON SCREEN TEXT: "LLM = large language model"]

Claude, ChatGPT, Gemini, Microsoft Copilot: they're all built on something called a large language model, or LLM. It's been trained on an enormous amount of text: books, articles, websites, code and conversations. From all that reading, it learned the patterns of language well enough to write, explain, summarize and reason through problems in plain English.

Then it was trained further to be a helpful assistant. That's it. No magic, no consciousness, no little person inside.

But don't let "it's just patterns" fool you either. Those patterns capture a remarkable amount of human knowledge and skill.

3. A mental model that helps · 1:00

[ON SCREEN TEXT: "A brilliant new assistant on their first day"]

Think of your AI assistant as a brilliant, extremely well-read new assistant on their first day. They've read more than any human ever could, they work in seconds, and they never mind redoing something ten times.

But they've never met you, so they don't know your job, family, preferences or goals unless you tell them. And sometimes they state things confidently that are simply wrong, without warning you.

Every good habit in this course flows from that picture. Because they've never met you, you'll learn to give context, and because they're fast and tireless, you'll learn to ask for changes. And because they can be confidently wrong, you'll learn when and how to check.

4. What it's great at, and what it's not · 1:50

[ON SCREEN TEXT: "Drafting · Rewriting · Explaining · Organizing · Brainstorming · Summarizing"]

So what is AI great at? Drafting, rewriting, explaining, organizing, brainstorming and summarizing. Notice the pattern: these are all language tasks.

[ON SCREEN TEXT: "Not a search engine · Not a database of facts · Not a mind reader · Not a professional · Not your memory"]

And what is it not? It's not a search engine, unless your assistant searches the web for you, and many can. It's not a database of facts either, because it generates the most plausible response, which is usually right but not always.

It's not a mind reader, so vague requests get generic answers. It's not a professional: it can help you understand a medical, legal or financial topic, but it can't see your full situation or take responsibility for advice. And it's not your memory, because most assistants start each new conversation fresh.

5. See the difference · 2:40

[SCREEN RECORDING] **Paste this prompt:**

```
Give me dinner ideas.
```

Here's a typical first attempt. You get a reasonable list, but it's generic. It could be for anyone.

[SCREEN RECORDING] **Paste this prompt:**

```
I'm cooking for two adults and a 6-year-old who hates anything spicy.
We have about 30 minutes on weeknights and we're watching our budget.
Suggest 5 dinner ideas. No pasta, we already eat it a lot.
For each one, give a one-line description and the main ingredients.
```

Now look at the difference. Same assistant, a far better answer, because we treated it like a capable new assistant who needs a briefing. You'll master that skill in Module 2.

6. Common mistakes · 3:30

[ON CAMERA]

Three mistakes to avoid. First, treating it like a search box: three keywords get you three keywords' worth of help, so write the way you'd talk to a person.

Second, trusting it blindly, or dismissing it entirely. It's a powerful tool that needs a human in charge. And third, giving up after one answer, because the first reply is a starting point, not the finished product.

7. Try it now · 4:00

[ON SCREEN TEXT: "Try it now"]

Now it's your turn. Paste the "Try it now" prompt from the written lesson into any assistant. It asks the AI to explain what it is and isn't good at, then to ask you three questions about your daily life.

Answer them honestly, and notice how its suggestions improve once it knows a little about you. No assistant yet? Lesson 3 walks you through setup, so come back to this afterwards.

8. Recap and what's next · 4:30

[ON CAMERA]

Let's recap. AI assistants are large language models, trained on vast amounts of text. Picture a brilliant, tireless new assistant who has never met you and is sometimes confidently wrong.

They're strongest at language tasks. Better context in means better answers out, and important facts always deserve a check.

In the next lesson, How AI Assistants Work, and Why They Make Things Up, you'll see how an answer actually gets made, so you know when to trust it. See you there.

ON-SCREEN TEXT

- What AI Really Is (and Isn't)
- LLM = large language model
- A brilliant new assistant on their first day
- Drafting · Rewriting · Explaining · Organizing · Brainstorming · Summarizing
- Not a search engine · Not a database of facts · Not a mind reader · Not a professional · Not your memory
- Try it now

LESSON PAGE DESCRIPTION

What exactly is an AI assistant, and how should you think about it? This lesson gives you one plain-English mental model, shows what AI is brilliant at and where it falls short, and demonstrates how a little context turns a generic answer into a genuinely useful one.

Lesson 2: How AI Assistants Work, and Why They Make Things Up

Course	AI Essentials: Use AI in Everyday Life
Module	1 · Getting Started
Length	4–5 min (~660 spoken words)
Format	Talking head + screen recording

Goal of this video: Understand how an AI assistant writes its answers, why it sometimes states false things with confidence, and which kinds of answers you should double-check.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Have both book prompts from the written lesson's worked example ready to paste: the book question and the confidence follow-up.
- Ask your editor to prepare the risk ladder from the written lesson (lower risk vs. higher risk) as a simple two-column graphic.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "How AI Assistants Work, and Why They Make Things Up"]

Ask an AI assistant for a book recommendation, and it might suggest a title that sounds perfect, by a real author, that was never written. That isn't a glitch or a lie. It's a direct result of how these tools work.

Once you understand why it happens, you'll know when to trust an answer and when to double-check.

2. How an answer gets made · 0:25

[ON SCREEN TEXT: "Most plausible, not verified"]

When you send a message, the assistant doesn't look up a stored answer. It writes its reply one small piece at a time, called tokens, each time predicting what should come next. Those predictions are based on your message, the conversation so far and everything it learned in training.

Because it learned from so much human writing, its predictions are often excellent. But the core process is "produce the most plausible continuation," not "retrieve the verified truth." Usually those are the same thing, and sometimes they aren't.

3. Four things worth knowing · 1:00

[ON SCREEN TEXT: "Cutoff date · Context window · No memory by default · Built to agree"]

Four quick things worth knowing. One: training has a cutoff date, so ask about something newer and it may not know, or may guess. If timing matters, ask: "Did you search for this, or is it from your training?"

Two: it only sees what's in the current chat. That's its working memory, called the context window, and in a very long conversation early details can get missed. Three: it doesn't remember you between chats by default, unless your assistant has a memory feature.

And four: it's built to be agreeable. "Isn't this a great plan?" gets a different answer than "What are the weaknesses in this plan?"

4. Why AI "hallucinates" · 1:50

[ON SCREEN TEXT: "Hallucination: something false, stated with confidence"]

When AI states something false with complete confidence, that's called a hallucination. It happens because the assistant fills gaps with patterns, and the most plausible-sounding text can still be wrong. And a made-up answer sounds exactly as sure of itself as a correct one.

Errors cluster around specifics: names, dates, statistics, quotes, web links, page numbers and legal citations. Modern assistants hallucinate far less than early versions, but it still happens. So your job is to know where the risk is.

5. The risk ladder · 2:25

[ON SCREEN TEXT: "Lower risk: drafting, explaining, summarizing your text · Higher risk: facts, numbers, sources, medical, legal, financial"]

That's where the risk ladder comes in. Brainstorming, drafting, explaining well-established ideas and summarizing text you provided are lower risk, and AI shines there with little checking. Specific facts and numbers, recent events and prices, quotes and sources, and medical, legal and financial specifics are higher risk, so verify before you rely on them.

6. Catching a hallucination · 2:45

[SCREEN RECORDING] **Paste this prompt:**

```
What are the best books about building better habits?
Include the author and year for each.
```

Here's the worked example from the written lesson. You get a tidy list, and most items are probably real. But one could be a plausible blend of a real author and a title they never wrote.

[SCREEN RECORDING] **Paste this prompt:**

```
For each book you listed, rate how confident you are that the title,
author and year are exactly right (high, medium or low). Flag anything
I should double-check before I buy it.
```

Self-ratings aren't perfect, but they reliably surface the shakiest items. Then a ten-second search for each flagged title settles it.

7. Common mistakes · 3:40

[ON CAMERA]

Three common mistakes. First, asking for sources and never opening them: AI can produce realistic-looking citations that don't exist, so click through.

Second, leading questions. Asking why something is true invites a defense of it, so ask whether it's true and what the evidence is on each side. And third, keeping one chat going forever: new topic, new chat.

8. Try it now · 4:05

[ON SCREEN TEXT: "Try it now"]

Your exercise: ask your assistant about something you know really well, like your hometown, your job or a hobby. Read the answer like an expert would. Is anything slightly off, outdated or invented?

Then paste the follow-up from the written lesson, which asks which parts of its answer are most likely to be wrong and how to verify them. Seeing AI's mistakes on a topic you know builds the instincts you'll need on topics you don't.

9. Recap and what's next · 4:40

[ON CAMERA]

Let's recap. AI predicts the most plausible next words; it doesn't retrieve verified facts. It has a training cutoff, a limited working memory per chat, and usually no memory of you between chats.

Hallucinations cluster around specifics, so use AI freely for drafting and thinking, and verify specifics before you rely on them.

In the next lesson, Set Up Your AI Assistant (and Protect Your Privacy), you'll choose your assistant and set it up safely. See you there.

ON-SCREEN TEXT

- How AI Assistants Work, and Why They Make Things Up
- Most plausible, not verified
- Cutoff date · Context window · No memory by default · Built to agree
- Hallucination: something false, stated with confidence
- Lower risk: drafting, explaining, summarizing your text · Higher risk: facts, numbers, sources, medical, legal, financial
- Try it now

LESSON PAGE DESCRIPTION

Why does AI sometimes invent books, quotes and facts? This lesson explains in plain English how an assistant writes its answers, what training cutoffs and context windows mean, and where mistakes cluster. You'll also see a simple follow-up prompt that helps you catch a hallucination before you rely on it.

Lesson 3: Set Up Your AI Assistant (and Protect Your Privacy)

Course	AI Essentials: Use AI in Everyday Life
Module	1 · Getting Started
Length	4–5 min (~670 spoken words)
Format	Talking head + screen recording

Goal of this video: Choose an AI assistant, set it up safely, check the four privacy settings that matter, and know what never to paste into a chat.

BEFORE YOU RECORD

- Log in to your assistant on its official website or app and open a new chat. Keep your password, email address and account details off screen.
- Have the first-conversation prompt from the written lesson ready, and decide what you'll put in place of each bracketed part: your role or situation, two or three things you'd like help with, and how you like your answers.
- Ask your editor to prepare the "never paste" list from the written lesson as a simple title card.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Set Up Your AI Assistant (and Protect Your Privacy)"]

Choosing an AI assistant can feel like choosing a phone plan: lots of options, lots of opinions. Here's the reassuring truth. For everyday use the major assistants are all capable, and every skill in this course works with any of them.

The best assistant is the one you'll actually open. So let's get you set up properly, in about ten minutes.

2. Pick one assistant · 0:25

[ON SCREEN TEXT: "Claude · ChatGPT · Gemini · Microsoft Copilot"]

The most widely used general-purpose assistants include Claude, made by Anthropic, ChatGPT from OpenAI, Gemini from Google, and Microsoft Copilot. Most offer a free version that's plenty for this course, plus paid plans with higher limits and extra features.

If you already live in Google or Microsoft tools, their assistants may fit neatly into your day. If you're using AI for work, check whether your employer provides or approves a specific tool. Features change often, so don't overthink it: pick one now, and add a second anytime.

3. Set it up safely · 1:05

[ON SCREEN TEXT: "Official app · Strong password · Two-step verification"]

Use the official website or official app, and in an app store, check the developer name carefully. Copycat apps exist, and some charge for things that are free. Then use a strong, unique password, and turn on two-step verification if it's offered.

Install the app on your phone too. Many of the most useful moments happen away from your desk: a quick message, a photo of a confusing form, a question while you're cooking.

4. Four privacy settings · 1:35

[ON SCREEN TEXT: "Training · History · Memory · Temporary chats"]

Next, open your assistant's settings and look for four things. Names vary by product, but the ideas are the same. First, model training or data controls: decide whether your conversations can be used to improve their models, and set it on purpose.

Second, chat history: know where your past conversations live and how to delete one. Third, memory or personalization: find where to view, edit or switch it off. Fourth, temporary or private chats, which some assistants offer for one-off sensitive questions.

Policies differ between companies and plans, and they change over time. Five minutes on your assistant's privacy page is time well spent.

5. The postcard rule · 2:20

[ON SCREEN TEXT: "The postcard rule: write as if someone else could read it"]

Now the most important habit in this lesson: the postcard rule. Write as if your message could be read by someone else. Not because anyone is likely to read it, but because it keeps you careful by default.

[ON SCREEN TEXT: "Never paste: passwords and codes · card, bank or ID numbers · other people's private information · unapproved confidential work information"]

So never paste passwords, PINs or security codes, or full card, bank account or government ID numbers. Don't share other people's private information without a good reason, or confidential work information your employer hasn't approved for AI tools.

You can still get help with sensitive topics. Just remove or swap the identifying details. "My client, a small-business owner in Ohio" works just as well as their name and address.

6. Your first real conversation · 3:05

[SCREEN RECORDING] **Paste this prompt:**

```
Hi! I'm setting you up as my everyday AI assistant. A little about me:
- I'm a [YOUR ROLE OR SITUATION, E.G. "TEACHER AND PARENT OF TWO"]
- I'd love help with [2-3 THINGS, E.G. "EMAILS, MEAL PLANNING, SPANISH"]
- I prefer answers that are [E.G. "SHORT AND PRACTICAL, WITH BULLETS"]

Based on this, suggest five specific ways you could help me this week.
Keep each suggestion to one sentence.
```

Here's a first real conversation. I'm swapping each bracketed part for my own details before I send it. Notice there's nothing sensitive in here, just enough for the assistant to be useful.

You'll get five specific suggestions, each one sentence long. Pick one and try it today.

7. Common mistakes · 3:40

[ON CAMERA]

A few common mistakes. Downloading the first app with "AI" in its name, instead of checking the developer. Skipping the settings, when five minutes now saves you wondering later where your data went.

Pasting first, thinking second: skim any document for personal or confidential details before you paste it. And trying five tools at once: get comfortable with one first, because the skills transfer.

8. Try it now · 4:10

[ON SCREEN TEXT: "Try it now"]

Your turn. Create your account or log in using the official site or app, then find those four privacy settings and set each one deliberately. Send the first-conversation prompt from the written lesson and try one of its suggestions.

Bonus: install the mobile app and ask one question from your phone.

9. Recap and what's next · 4:30

[ON CAMERA]

Quick recap. The major assistants are all capable, so pick one and start. Use the official app or website, a strong password and two-step verification.

Review your privacy settings on day one, and follow the postcard rule: never share passwords, financial or ID numbers, or confidential data.

In the next lesson, The 5-Part Prompt: Role, Context, Task, Format, Examples, you'll learn the simple framework behind almost every great AI answer. See you there.

ON-SCREEN TEXT

- Set Up Your AI Assistant (and Protect Your Privacy)
- Claude · ChatGPT · Gemini · Microsoft Copilot
- Official app · Strong password · Two-step verification
- Training · History · Memory · Temporary chats
- The postcard rule: write as if someone else could read it
- Never paste: passwords and codes · card, bank or ID numbers · other people's private information · unapproved confidential work information
- Try it now

LESSON PAGE DESCRIPTION

Get your AI assistant set up properly in about ten minutes. This lesson helps you choose an assistant without overthinking it, set it up safely, check the four privacy settings that matter, and follow the postcard rule so you never share what you shouldn't.

Lesson 4: The 5-Part Prompt: Role, Context, Task, Format, Examples

Course	AI Essentials: Use AI in Everyday Life
Module	2 · Prompting That Works
Length	4–5 min (~620 spoken words)
Format	Talking head + screen recording

Goal of this video: Write prompts using role, context, task, format and examples, so you get a useful answer the first time instead of a generic one.

BEFORE YOU RECORD

- Open your AI assistant in a new chat, and be ready to open a second new chat for the "after" prompt.
- Have both neighbor prompts from the written lesson's "Before and after" section ready to paste.
- Ask your editor to prepare the five parts (Role, Context, Task, Format, Examples) as a title card that can build up one word at a time.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "The 5-Part Prompt"]

Two people ask the same AI assistant for help with the same problem. One gets a bland, generic answer and decides AI is overhyped. The other gets something so useful they use it almost word for word.

The difference isn't luck or a paid plan. It's the prompt, which is simply what you type to the AI. And nearly every great prompt contains some mix of five parts.

2. The five parts · 0:30

[ON SCREEN TEXT: "Role · Context · Task · Format · Examples"]

First, role: who the AI should act as. "Act as an experienced kindergarten teacher" gets you different advice from "act as a pediatric sleep consultant." Both are useful, for different problems.

Second, context: your situation. This is the most important part, and the one most people skip. Your assistant has never met you, so tell it who's involved, what you've already tried, and what constraints matter, like budget, time, skill level or tone.

Third, the task: exactly what you want. "Help me with my resume" is vague, but "Rewrite the summary section of my resume to highlight my leadership experience" is a task.

Fourth, format: the shape you want, like bullet points, a table, three options or under 150 words. This one part saves more editing time than any other.

And fifth, examples. If you have one of what good looks like, like a past email you liked, include it. Examples communicate style faster than any description.

3. Before and after · 1:35

[SCREEN RECORDING] **Paste this prompt:**

```
Write a message to my neighbor about their dog barking.
```

Let's see it in action. Here's the "before" prompt from the written lesson. It works, but you get a generic, slightly stiff note.

[SCREEN RECORDING] **Paste this prompt:**

```
Act as a tactful communicator who helps neighbors stay on good terms.

Context: My next-door neighbor's dog barks most weekdays from about 8am
to noon while they're at work. I work from home, so it's hard to take
calls. We get along well and I don't want to sound like I'm complaining.

Task: Write a short, friendly text message that raises the issue and
suggests we figure out a solution together.

Format: Under 80 words. Warm and casual. No passive-aggressive phrasing.

Example of my usual tone: "Hey! Hope your weekend was good. Quick
question for you when you get a sec..."
```

Now the "after" version, in a new chat. You can see all five parts: a role, real context, a clear task, a format with a word limit and tone, and an example of the tone you want. This time you get a message you could send as is, that protects the relationship.

4. You don't need all five · 2:40

[ON CAMERA]

You don't need all five every time. A quick question might only need a task. But when an answer disappoints, the fix is almost always one of these five.

You don't need the labels either. Writing naturally works just as well, as long as the information is there. The written lesson has a reusable template with all five parts, so copy it into your notes app.

5. Pro tip: let the AI interview you · 3:05

[ON SCREEN TEXT: "Not sure what to include? Let the AI interview you."]

Here's a pro tip for when you don't know which context matters. Tell the AI your goal, and ask it to ask you up to five questions, all at once, before it answers. It turns the AI into an interviewer, so you end up with a great prompt without having to plan one.

6. Common mistakes · 3:30

The most common mistake is skipping context. The AI can't read your mind, and two extra sentences of background usually transform the answer. Also, don't ask for everything at once: "Plan my wedding" is too big, so break large jobs into steps.

And don't forget the format, or you'll get the AI's default, which is often longer than you want. Courtesy is fine, but clarity matters more.

7. Try it now · 4:00

[ON SCREEN TEXT: "Try it now"]

Your turn. Think of a real task you need to do this week, like a message, a plan or a decision. Write it as a one-line prompt, send it and save the answer.

Then rewrite it using all five parts and send it in a new chat. Compare the two answers side by side: which part made the biggest difference?

8. Recap and what's next · 4:25

[ON CAMERA]

Let's recap. Great prompts combine role, context, task, format and examples whenever the result matters. Context is the most powerful part, and the one most often skipped.

Specifying the format saves more editing time than anything else. And when you're unsure what to include, ask the AI to interview you first.

In the next lesson, Iterate Like a Pro: Follow-Ups That Fix Any Answer, you'll learn what to do when the first answer isn't quite right. See you there.

ON-SCREEN TEXT

- The 5-Part Prompt
- Role · Context · Task · Format · Examples
- Not sure what to include? Let the AI interview you.
- Try it now

LESSON PAGE DESCRIPTION

Learn the simple framework behind almost every great AI answer: role, context, task, format and examples. This lesson walks through each part, shows a before-and-after prompt side by side, and shares a shortcut for when you're not sure what to include.

Lesson 5: Iterate Like a Pro: Follow-Ups That Fix Any Answer

Course	AI Essentials: Use AI in Everyday Life
Module	2 · Prompting That Works
Length	4–5 min (~600 spoken words)
Format	Talking head + screen recording

Goal of this video: Turn a so-so first answer into exactly what you need with specific follow-ups, and know when to follow up, edit your prompt or start a fresh chat.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Have the birthday party prompt and its first follow-up from the written lesson's worked example ready to paste, in the same chat.
- Ask your editor to prepare the five follow-ups as a simple list graphic.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Iterate Like a Pro"]

Here's something experienced AI users know: they rarely get a perfect answer on the first try either. What they do differently is what happens next. Instead of starting over or giving up, they steer.

A good follow-up takes ten seconds, and it often does more than a perfect first prompt.

2. Conversation, not vending machine · 0:20

[ON SCREEN TEXT: "Think conversation, not vending machine"]

A vending machine gives you one thing per button press. A conversation builds. Your assistant can see everything earlier in the chat, so you never need to repeat yourself.

Just react to what you got, the way you'd give feedback to a colleague. The simplest follow-ups are often the most effective, like "shorter," "more casual," "give me three different versions" or "explain that like I'm new to this."

3. Watch a plan take shape · 0:50

[SCREEN RECORDING] **Paste this prompt:**

```
Help me plan my daughter's 8th birthday party.
```

This is the worked example from the written lesson. The first answer is a generic checklist. It's fine, but it could be for anyone.

[SCREEN RECORDING] **Paste this prompt:**

```
Budget is about $200, 12 kids, at our house, and she loves science.
```

One follow-up, and the plan becomes a science-themed party at home. Notice I didn't repeat anything, because the assistant still sees the whole conversation.

[ON CAMERA]

In the written lesson, two more follow-ups turn it into a timeline in 15-minute blocks, then a shopping list grouped by store section. Three short follow-ups, one genuinely useful plan, and each step built on the last.

4. Five follow-ups that do the heavy lifting · 1:55

[ON SCREEN TEXT: "Say what's wrong and right · Ask for options · Ask for a self-critique · Add missing context · Ask what it needs"]

The written lesson gives you five follow-ups that do the heavy lifting. First, say what's wrong, and what's right. "The ending sounds salesy" beats "make it better" every time.

Second, ask for options, because choosing is faster than describing what you want. Third, ask it to critique itself the way a tough editor would, then write an improved version. This works surprisingly well for writing, plans and arguments.

Fourth, add the context you forgot. And fifth, simply ask what information would help it make the answer much better.

5. Follow up, edit or start fresh? · 2:35

[ON SCREEN TEXT: "Close? Follow up · Wrong direction? Edit or regenerate · Long and muddled? New chat"]

So when should you follow up, and when should you start again? Follow up most of the time, when the answer is on the right track and just needs adjusting. If it went in the wrong direction from the start, edit your original message or regenerate, because fixing the prompt is cleaner than arguing with a bad answer.

And start a new chat when you're switching topics, or the conversation has become long and muddled. Here's a handy trick: before you leave, ask the old chat to summarize what you've worked out, including your preferences and decisions, so you can paste it into the new one.

6. Common mistakes · 3:20

[ON CAMERA]

The biggest mistake is starting over every time, which throws away all the context you built. Close behind is vague feedback: "That's not right" gives the AI nothing to work with, so say what's off and what you want instead.

And don't settle for the first draft. Two quick follow-ups usually lift an answer from okay to excellent.

7. Try it now · 3:45

[ON SCREEN TEXT: "Try it now: three follow-ups"]

Here's your exercise. Take an answer from an earlier lesson, or ask for something new, like a packing list or this week's to-do list. Improve it with at least three follow-ups: one about length or tone, one asking for options, and one asking the AI to critique itself.

Notice which follow-up helped most. That one goes in your toolkit.

8. Recap and what's next · 4:10

[ON CAMERA]

To recap: the first answer is a draft, and the real value is in the follow-up. Be specific about what to keep and what to change. Ask for options, ask for a self-critique, and ask what information is missing.

Follow up when you're close, and edit your prompt or start fresh when you're way off.

In the next lesson, Give AI Your Context: Custom Instructions, Projects & Templates, you'll set things up once so you can stop re-explaining yourself. See you there.

ON-SCREEN TEXT

- Iterate Like a Pro
- Think conversation, not vending machine
- Say what's wrong and right · Ask for options · Ask for a self-critique · Add missing context · Ask what it needs
- Close? Follow up · Wrong direction? Edit or regenerate · Long and muddled? New chat
- Try it now: three follow-ups

LESSON PAGE DESCRIPTION

The first answer from an AI assistant is only a draft. This lesson shows how a few short, specific follow-ups turn a generic reply into exactly what you need, and how to tell when to follow up, edit your prompt or start a fresh chat.

Lesson 6: Give AI Your Context: Custom Instructions, Projects & Templates

Course	AI Essentials: Use AI in Everyday Life
Module	2 · Prompting That Works
Length	4–5 min (~630 spoken words)
Format	Talking head + screen recording

Goal of this video: Set up personal instructions, workspaces and saved templates so your assistant starts every conversation already knowing the basics about you.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Copy the personal instructions template from the written lesson and decide what you'll put in place of each bracketed part. Keep it general: no account numbers, health specifics or anything you wouldn't want stored.
- Optional: have a note called "My AI Prompts" open in your notes app to show briefly on screen.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Give AI Your Context"]

If you've used AI for a week, you've probably typed the same background again and again: who you are, what you do, how you like your answers. There's a better way.

In this video, you'll see how to set things up once, so your assistant starts every conversation already knowing the basics.

2. Three layers of context · 0:20

[ON SCREEN TEXT: "Personal instructions · Workspaces · Templates"]

Think of context in three layers, from broadest to most specific. First, personal instructions: facts and preferences that apply to almost every chat. Second, workspaces: background for one ongoing area of your life, like a job search, a renovation or a course you're studying.

Third, templates: saved prompts for tasks you repeat. Assistants name these features differently, like custom instructions, personal preferences or projects, and features change over time. If yours doesn't have one of them, a note you paste in works everywhere.

3. Layer one: personal instructions · 1:00

Most assistants have a settings area where you can describe yourself and how you'd like it to respond. Whatever you write there is quietly included in your conversations.

[SCREEN RECORDING] **Paste this prompt:**

```
About me:
- I'm [ROLE OR LIFE SITUATION], based in [CITY OR COUNTRY].
- I mostly use AI for [YOUR TOP 3 USES].
- I'm [A BEGINNER / COMFORTABLE / AN EXPERT] with [RELEVANT TOPICS].

How I like answers:
- Get to the point: lead with the answer, then the detail.
- Use plain English and explain any jargon.
- Use bullet points for steps and lists.
- If my request is unclear, ask me a question before answering.
- If you're unsure about a fact, say so.
```

Here's the template from the written lesson, with my own details in place of the brackets. I'm pasting it at the start of a new chat, which works with any assistant, but if yours has a settings area for this, put it there instead.

Keep it short and general, and follow the postcard rule from Module 1: no sensitive details like account numbers or health specifics.

4. See the difference · 1:55

[SCREEN RECORDING] **Paste this prompt:**

```
Based on what you know about me, what are three ways you could save me time this week?
```

Now ask a question like this one, and check that the answer reflects what you told it.

That's the difference context makes. Ask a fresh assistant "How should I prepare for my meeting tomorrow?" and you'll get general tips. Ask one that knows you're a new team lead who prefers short bullet points and gets nervous presenting, and you'll get a focused prep checklist, with a few ways to calm your nerves.

5. Layer two: workspaces · 2:40

[ON CAMERA]

Layer two is workspaces. Some assistants let you group related chats into a project or workspace with its own instructions and files. That's perfect for anything that lasts weeks or months.

For a job search, you'd add your resume, a list of target roles and an instruction about the career change you're making, so every chat inside it, from a cover letter to interview practice, starts with the full picture. No workspace feature? Keep a short briefing note for each area, and paste it in when you start a related chat.

6. Layer three: templates · 3:20

[ON SCREEN TEXT: "My AI Prompts"]

Layer three is templates. Any prompt you use more than twice deserves to be saved. Create a note called "My AI Prompts" in the notes app you already use, and store your best prompts with blanks to fill in, like a weekly plan or a reply helper.

7. Common mistakes · 3:40

A few mistakes to avoid. Writing an essay: long instructions get diluted, so keep only what applies to most chats. Setting and forgetting: review your instructions every couple of months as your needs change.

Storing sensitive details: save preferences, not private data. And never checking memory: if your assistant remembers things, look at what it saved now and then, and delete anything outdated.

8. Try it now · 4:05

[ON SCREEN TEXT: "Try it now"]

Your turn. Write your personal instructions from the template in the written lesson, five to ten lines, and add them to your assistant's settings or a note.

Then start a new chat, ask that "three ways to save me time" question, and check that the answer reflects your instructions. Finally, create your "My AI Prompts" note and save two templates.

9. Recap and what's next · 4:30

[ON CAMERA]

Let's recap. Layer your context: personal instructions, workspaces for ongoing areas, and saved templates. Keep personal instructions short, general and free of sensitive details.

And save any prompt you use more than twice, because your template library is your superpower.

In the next lesson, Emails, Texts & Tricky Messages, you'll put all of this to work on the messages that fill your week. See you there.

ON-SCREEN TEXT

- Give AI Your Context
- Personal instructions · Workspaces · Templates
- My AI Prompts
- Try it now

LESSON PAGE DESCRIPTION

Stop re-explaining yourself every time you open a chat. This lesson shows you how to layer your context with short personal instructions, workspaces for ongoing projects and a library of saved prompt templates, so every answer starts closer to right.

Lesson 7: Emails, Texts & Tricky Messages

Course	AI Essentials: Use AI in Everyday Life
Module	3 · AI for Everyday Life
Length	4–5 min (~620 spoken words)
Format	Talking head + screen recording

Goal of this video: Use AI to turn your key points into clear messages, handle tricky and emotional replies calmly, and keep your messages sounding like you.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Have the team-email notes prompt from the written lesson ready to paste, plus the "How is this likely to come across" follow-up from the "Try it now" exercise, to send in the same chat.
- Ask your editor to prepare the four everyday situations as a simple list graphic.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Emails, Texts & Tricky Messages"]

How much of your week goes into writing messages? Not just emails, but texts to family, notes to your kid's school, a reply to a client, and that awkward message you've been avoiding for three days.

This is where AI pays off fastest for most people. Writing messages is pure language work, and you're the expert on whether the result sounds right.

2. The golden rule · 0:25

[ON SCREEN TEXT: "You bring the substance. AI handles the wording."]

Here's the golden rule: you bring the substance, and AI handles the wording. AI is excellent at how to say something, but only you know what to say. So give it your key points, even in messy shorthand, and let it shape them.

3. From notes to email · 0:45

[SCREEN RECORDING] **Paste this prompt:**

```
Turn these notes into a clear, friendly email to my team:
- meeting moved from Tuesday to Thursday, same time
- bring your Q3 numbers
- Sam is presenting the new schedule
- lunch provided
Keep it under 100 words.
```

Here are four rough notes and a word limit. That's all it takes: thirty seconds of notes, a few seconds of AI, one clear email.

Before you send anything important, ask one more question.

[SCREEN RECORDING] **Paste this prompt:**

```
How is this likely to come across to the person reading it?
```

Think of this as a calm second pair of eyes. It's worth asking before you send anything important or emotional.

4. Four everyday situations · 1:40

[ON CAMERA]

[ON SCREEN TEXT: "Replies · Saying no · Tricky messages · Complaints"]

The written lesson has prompts for four everyday situations. First, replying when you don't know what to say: paste the message, then give your main point and the tone you want. Before you paste someone else's message, remove details they wouldn't want shared, like phone numbers or addresses.

Second, saying no without burning a bridge, with a short, kind reply that declines clearly and doesn't over-apologize. Third, the emotionally tricky message. When you're angry, hurt or anxious, paste what they said and your draft, and ask for a version that's honest about how you feel, but calm and constructive.

[OPTIONAL PERSONAL EXAMPLE: a short moment when you were tempted to send an upset reply and a calmer second look would have helped]

Fourth, complaints that get results. Give the facts and exactly what you want, and ask for firm, factual and polite. Clear facts plus a specific request are much harder to ignore than an emotional rant.

5. Keep your own voice · 2:35

[ON SCREEN TEXT: "Give a sample · Ban the clichés · Do the final edit"]

Messages that sound like a corporate brochure don't feel like you, and people notice. So give it a sample: paste two or three messages you've written and say, "Match this tone and style."

Ban the clichés, like "I hope this email finds you well." And do the final edit yourself, changing a word or two and adding a personal detail, because that last 10 percent makes it yours.

Here's how it comes together in the written lesson's example. You need to cancel on a friend's weekend get-together, so you jot down rough notes and ask for a warm, casual text that suggests a specific evening for dinner next week. You tweak one word and send it: two minutes instead of twenty minutes of overthinking.

6. Common mistakes · 3:30

The biggest mistake is sending without reading. Always check names, dates, numbers and promises, because AI can add details that sound right but aren't. And don't let AI decide what you say: you decide the message, and AI helps with the wording.

Also, a text to your sister shouldn't read like a press release, so ask for "casual." And strip out phone numbers, addresses and account details before you paste.

7. Try it now · 4:00

[ON SCREEN TEXT: "Try it now"]

Your turn. Find a message you've been putting off answering; there's always one. Write your key points in rough shorthand, draft a reply with the reply prompt in the written lesson, then ask how it's likely to come across.

Make it yours with a personal touch, check the details, and send it.

8. Recap and what's next · 4:20

[ON CAMERA]

Let's recap. Give AI your key points and let it handle the wording. Ask how it will come across before sending anything important or emotional.

Protect your voice with writing samples, banned clichés and a quick personal edit. And always check names, dates and commitments before you hit send.

In the next lesson, Plan Anything: Meals, Travel, Budgets & Your Week, you'll turn AI into a personal planner that fits your real life. See you there.

ON-SCREEN TEXT

- Emails, Texts & Tricky Messages
- You bring the substance. AI handles the wording.
- Replies · Saying no · Tricky messages · Complaints
- Give a sample · Ban the clichés · Do the final edit
- Try it now

LESSON PAGE DESCRIPTION

Writing messages is where AI pays off fastest. This lesson shows you how to turn rough notes into clear emails, reply when you don't know what to say, say no gracefully and handle emotional messages calmly, all while keeping your own voice.

Lesson 8: Plan Anything: Meals, Travel, Budgets & Your Week

Course	AI Essentials: Use AI in Everyday Life
Module	3 · AI for Everyday Life
Length	4–5 min (~610 spoken words)
Format	Talking head + screen recording

Goal of this video: Use the goal + constraints + format formula to get meal, travel, budget and weekly plans that fit your real life, and know which details to confirm yourself.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Have the weekly planning prompt from the written lesson ready, and jot down what you'll put in place of each bracketed part: a week's tasks, appointments and deadlines, your fixed commitments, and when you have the most energy. A sample week is fine; leave out anything private.
- Have the "prepare tonight" question from the written lesson's Sunday reset ready to send in the same chat.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Plan Anything"]

Planning is a hidden time sink. Deciding what's for dinner, mapping out a trip, working out where the money goes, squeezing a too-full week into seven days: none of it is hard, exactly, but it drains your energy.

AI is a remarkably good planning partner, as long as you give it the one thing it can't guess: your constraints.

2. The planning formula · 0:25

[ON SCREEN TEXT: "Goal + Constraints + Format"]

A plan is only useful if it fits your real life, so every planning prompt needs three things. First, your goal: what you want to end up with. Second, your constraints: budget, time, people, preferences, restrictions, and what you already have.

Third, the format, meaning how you'll use the plan, like a shopping list, a day-by-day itinerary or a table. The more constraints you share, the less you'll have to fix later.

3. Plan your week · 0:55

[SCREEN RECORDING] **Paste this prompt:**

```
Here's everything on my plate this week: [TASKS, APPOINTMENTS AND
DEADLINES]. Fixed commitments: [MEETINGS, SCHOOL RUNS, ETC.]. I have
the most energy in the [MORNING / AFTERNOON].

Build a realistic day-by-day plan. Put demanding work in my high-energy
time, batch small tasks, leave buffer time, and tell me honestly what
won't fit, with suggestions for what to drop, delay or delegate.
```

Here's the weekly planning prompt from the written lesson, with a week's worth of tasks and commitments in place of the brackets. Look at that last line. A plan that pretends everything fits isn't a plan, and asking AI to be honest about capacity gives you permission to let something go.

[SCREEN RECORDING] **Paste this prompt:**

```
What's one thing I could prepare tonight to make this week easier?
```

This question is part of the Sunday reset from the written lesson, a 15-minute weekly routine. You brain-dump your week, ask for dinners that fit the busy evenings and one grocery list for the week, then finish with this. Four prompts, one calmer week.

4. Meals, travel and budgets · 2:05

[ON CAMERA]

The written lesson has a ready-made prompt for each area. For meals, include how many people, dietary needs and dislikes, cooking time and what you already have, and ask for one combined grocery list. Then follow up with something like "Swap Wednesday for something vegetarian" or "Which of these can I prep on Sunday?"

A note on allergies: AI can suggest recipes that avoid an allergen, but always read the labels yourself. It can't see what's actually in the product you buy.

For travel, AI is great at turning a vague idea into a day-by-day itinerary. But verify before you book: opening hours, prices, seasonal closures, transport timetables and entry or visa requirements change, so confirm details on official websites. If your assistant can search the web, ask it to include links, then open them.

For budgets, the prompt asks AI to sort your expenses into needs, wants and savings, suggest realistic places to cut, and show its math. Use rounded figures and categories, never account numbers, logins or full statements. And double-check the totals with a calculator, because it takes ten seconds to be sure.

5. Common mistakes · 3:25

[ON SCREEN TEXT: "No constraints = generic plan"]

The most common mistake is no constraints. "Plan a trip to Italy" gets a generic tourist list, while who, when, budget and pace change everything.

Also watch out for trusting time-sensitive details, and confirm anything you'll pay for or travel for. Ask for buffer time and honest trade-offs, so your plans aren't over-packed. And don't share sensitive financial details, because categories and rounded numbers are all AI needs.

6. Try it now · 3:55

[ON SCREEN TEXT: "Try it now: at least four constraints"]

Your turn. Pick one area: meals, a trip, your budget or your week. Write down at least four constraints before you write the prompt.

Then use the matching prompt in the written lesson, and improve the plan with two follow-ups. Save your final prompt to your "My AI Prompts" note so you can reuse it.

7. Recap and what's next · 4:20

[ON CAMERA]

To recap: every good planning prompt includes a goal, your constraints and a useful format. AI drafts the plan, and you confirm prices, hours, rules and anything you'll pay for.

Ask AI to tell you honestly what won't fit. And a 15-minute weekly planning session with AI can make the whole week calmer.

In the next lesson, Learn Anything Faster with an AI Tutor, you'll turn your assistant into a patient personal tutor. See you there.

ON-SCREEN TEXT

- Plan Anything
- Goal + Constraints + Format
- No constraints = generic plan
- Try it now: at least four constraints

LESSON PAGE DESCRIPTION

Turn AI into a personal planner for meals, trips, budgets and busy weeks. This lesson shows you the simple goal + constraints + format formula, demonstrates a weekly plan that's honest about what won't fit, and explains which details you should always confirm yourself.

Lesson 9: Learn Anything Faster with an AI Tutor

Course	AI Essentials: Use AI in Everyday Life
Module	3 · AI for Everyday Life
Length	4–5 min (~610 spoken words)
Format	Talking head + screen recording

Goal of this video: Use AI in tutor mode to understand new topics at your level, test yourself and make what you learn stick.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Pick one well-established topic to learn about on screen, such as one of the examples from the written lesson: how interest rates work or how to prune roses.
- Have the "explain it at my level" and "quiz me" prompts from the written lesson ready, with your topic in place of the placeholder. Send both in the same chat, and answer the first quiz question on screen.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Learn Anything Faster with an AI Tutor"]

Imagine a tutor who knows something about almost every subject, never gets impatient, is available at 2am, and will happily explain the same idea five different ways until it clicks. That's what an AI assistant can be for you.

But only if you use it to learn, not just to get answers.

2. Shortcut mode vs. tutor mode · 0:20

[ON SCREEN TEXT: "Shortcut mode: What's the answer? · Tutor mode: Help me understand this."]

There are two ways to use AI for learning. Shortcut mode is "What's the answer?" It's fast, but very little sticks.

Tutor mode is "Help me understand this." It's a little slower, and you actually learn. That's because learning takes effort, like explaining, recalling, making mistakes and correcting them, and a good AI tutor makes you do that work, with support.

3. Explain it at my level · 0:50

[SCREEN RECORDING] **Paste this prompt:**

```
Explain [TOPIC] to me. I'm a complete beginner. Start with the big
picture in 3-4 sentences, use an everyday analogy, then give me the
3 most important ideas I need to understand first.
```

Technique one: explain it at my level. This prompt tells the AI I'm a complete beginner, then asks for the big picture, an everyday analogy and the three most important ideas to understand first. Always say your level, or the explanation may be pitched too high or too low.

Not clicking yet? Follow up with "Explain it a different way," "Give me a real-world example" or "What's a common misconception about this?"

4. Quiz me · 1:35

[SCREEN RECORDING] **Paste this prompt:**

```
Quiz me on [TOPIC] with 5 questions, one at a time. Wait for my answer
before moving on. If I get one wrong, give me a hint before the answer.
At the end, tell me which areas I should review.
```

Technique two: quiz me. Testing yourself is one of the most effective ways to remember things, and learning researchers call it retrieval practice. Notice it asks one question at a time and waits for my answer, with a hint before the answer if I get one wrong.

5. Three more techniques · 2:10

[ON CAMERA]

[ON SCREEN TEXT: "Teach it back · Socratic tutor · Learning plan"]

Technique three: teach it back. If you can explain something simply, you understand it, so explain the topic in your own words and ask the AI what you got right, what you got wrong or left out.

Technique four is the Socratic tutor. Instead of giving you answers, it asks guiding questions, one at a time, that help you work it out yourself. It's slower, and it's also how the deepest learning happens.

And technique five: ask for a week-by-week learning plan, based on your goal, your timeframe and the time you have each week. All five prompts are in the written lesson.

Learning a language? The written lesson also has a prompt that turns AI into a patient conversation partner, one that gently corrects your mistakes after each reply.

6. Students and accuracy · 3:05

A note for students and parents. Using AI to understand material, practice and get feedback is powerful, but using it to write your assignments usually breaks the rules and skips the learning. Check your school's policy, and use AI the way you'd use a great tutor, not a ghostwriter.

And watch for accuracy. AI is very reliable on well-established topics, but less reliable on niche, fast-changing or highly technical specifics. If details matter, as with a certification exam, a medical topic or a legal requirement, confirm key facts with your textbook, official guidance or another trusted source.

7. Try it now · 3:45

[ON SCREEN TEXT: "Try it now: explain · quiz · teach it back"]

Your turn. Pick something you've always wanted to understand better, anything from how interest rates work to how to prune roses. Use the "explain it at my level" prompt, then the quiz prompt, and answer all five questions honestly.

Finally, explain the topic back in your own words and ask for feedback. Don't just read passively, because stopping to explain things back is where the learning happens.

8. Recap and what's next · 4:15

[ON CAMERA]

Let's recap. Use AI in tutor mode, focused on understanding, rather than shortcut mode. Ask for explanations at your level, then quiz yourself and teach it back.

A Socratic tutor makes you think, and thinking is what makes learning stick. And verify key facts when you're learning niche or high-stakes topics.

In the next lesson, Health, Legal & Money Questions: Using AI Safely, you'll learn how to use AI on serious topics, and when to see a professional. See you there.

ON-SCREEN TEXT

- Learn Anything Faster with an AI Tutor
- Shortcut mode: What's the answer? · Tutor mode: Help me understand this.
- Teach it back · Socratic tutor · Learning plan
- Try it now: explain · quiz · teach it back

LESSON PAGE DESCRIPTION

Use AI as a patient personal tutor instead of an answer machine. This lesson shows you how to get explanations at your level, quiz yourself, teach ideas back and build a learning plan, plus when to double-check what you learn.

Lesson 10: Health, Legal & Money Questions: Using AI Safely

Course	AI Essentials: Use AI in Everyday Life
Module	3 · AI for Everyday Life
Length	4–5 min (~670 spoken words)
Format	Talking head + screen recording

Goal of this video: Use AI to understand and prepare for health, legal and money questions with the traffic-light system, and know when to verify or see a professional.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Prepare a short, generic clause from a sample lease for the demo, with no names, addresses or account numbers in it. Fill in the prompt's brackets with "lease", that clause and your state or country.
- Ask your editor to prepare the traffic-light table from the written lesson (green, yellow, red) as a simple graphic.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Health, Legal & Money Questions: Using AI Safely"]

Sooner or later you'll want to ask AI about something serious. A symptom, a confusing clause in a lease, or whether to pay off debt or save. AI can be genuinely helpful here, but it can also be confidently wrong in ways that matter.

This lesson gives you a simple system for getting the benefits safely.

[ON SCREEN TEXT: "Emergency? Contact emergency services, not AI"]

But first, the most important rule. If you or someone else might be in danger, or there are symptoms like chest pain, difficulty breathing or signs of a stroke, contact emergency services right away. Don't ask an AI.

2. Why these topics are different · 0:40

With everyday tasks, a mistake costs you a rewrite. Here, it can cost your health, your money or your legal rights. Three reasons to be extra careful:

First, AI can't see your full situation. A doctor examines you, a lawyer reads your documents, and a financial advisor knows your whole picture, but AI only knows what you typed.

Second, rules depend on where you live. Laws, taxes, benefits and medical guidelines vary by country, state and even city, and AI may blend them together.

Third, it tends to reassure. Assistants are built to be helpful and agreeable, so they can lean toward telling you what you hope to hear.

3. The traffic-light system · 1:25

[ON SCREEN TEXT: "Green: go · Yellow: verify · Red: see a professional"]

Here's the system: think of a traffic light.

Green is explaining terms, summarizing documents and preparing questions. Go ahead. Yellow is general guidance, typical options and how a process usually works, so verify it with an official source.

Red is diagnosis, medication changes, legal strategy and big money decisions. Prepare with AI, and decide with a professional. The safest and most valuable use is green: understanding and preparing.

4. Demo: understand before you sign · 1:55

[CUT TO SCREEN]

Let me show you a green-light question, using a short clause from a sample lease with nothing personal in it.

[SCREEN RECORDING] **Paste this prompt:**

```
Here's a clause from my [LEASE / CONTRACT / TERMS], with names and
addresses removed: [PASTE CLAUSE]. I'm in [STATE OR COUNTRY].
1. Explain what it means in plain English.
2. What could it mean for me in practice? Give one example.
3. What questions should I ask the other party, or a lawyer, about it?
```

Notice the prompt removes names and addresses, and says where you are, because rules vary so much.

Back comes a plain-English explanation, a practical example and questions for the other party or a lawyer. It helps you understand without pretending to decide for you. But AI can't confirm that a contract is fair or enforceable where you live.

The written lesson has similar templates for a doctor's appointment and a money decision. They include lines like "Don't diagnose me" and "Don't tell me what to do," so you get understanding, not a verdict.

[ON CAMERA]

For anything with real stakes, like a dispute, a large contract or an immigration matter, talk to a qualified lawyer. Many areas have free or low-cost legal aid services. And with money, check any numbers with a calculator, and confirm current rates, fees and tax rules with official sources.

5. The biggest mistake · 3:20

[ON SCREEN TEXT: "Ask for understanding, not a verdict"]

The most common mistake is asking for a verdict instead of understanding. "Should I sign this?" is red. "What does this clause mean, and what should I ask?" is green.

Two more habits: always say where you are, and anonymize first. Strip out names, dates of birth, addresses, account numbers, policy numbers and medical record numbers before you paste anything.

"A 45-year-old with type 2 diabetes" is all the AI needs, not your patient ID. Finally, don't treat reassurance as the all-clear. If something feels wrong with your health, money or legal situation, a professional opinion beats a reassuring paragraph.

6. Try it now · 4:05

[ON SCREEN TEXT: "Try it now: decode a confusing document"]

Find a document with confusing language, like an insurance policy, a bill, a lease or a benefits letter. Remove the personal details, paste a short section, and ask for a plain-English explanation and three questions.

Then decide which traffic light each of your follow-up questions falls under, and where you'd verify the yellow ones. The steps are in the written lesson.

7. Recap and what's next · 4:30

[ON SCREEN TEXT: "Understand · Organize · Prepare"]

So, to recap. Use AI to understand, organize and prepare. Follow the traffic lights: green means go, yellow means verify, and red means see a professional.

Always include your location, and always remove identifying details. And in an emergency, contact emergency services, never an AI.

In the next lesson, Write and Edit Better (Without Sounding Like a Robot), you'll learn to use AI as a sharp editor, so your writing gets clearer while still sounding like you. See you there.

ON-SCREEN TEXT

- Health, Legal & Money Questions: Using AI Safely
- Emergency? Contact emergency services, not AI
- Green: go · Yellow: verify · Red: see a professional
- Ask for understanding, not a verdict
- Try it now: decode a confusing document
- Understand · Organize · Prepare

LESSON PAGE DESCRIPTION

Serious topics need a different approach. In this lesson you'll learn the traffic-light system for health, legal and money questions: use AI to understand and prepare, verify general guidance with official sources, and make diagnoses, legal strategy and big money decisions with a professional. You'll also see how to protect your privacy and why your location matters.

Lesson 11: Write and Edit Better (Without Sounding Like a Robot)

Course	AI Essentials: Use AI in Everyday Life
Module	4 · AI for Work & Productivity
Length	4–5 min (~610 spoken words)
Format	Talking head + screen recording

Goal of this video: Use AI as an editor and writing partner, with specific instructions that make your writing clearer while keeping your own voice.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Have a short draft ready to edit, one or two paragraphs long: an email, a post or a section of a report with no private details. A slightly wordy draft shows the edits best.
- In the first demo, replace the bracketed placeholder at the bottom of the prompt with your draft.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Write and Edit Better (Without Sounding Like a Robot)"]

You've probably read text that was obviously written by AI. It's smooth, vague, oddly enthusiastic, and full of words like "delve" and "elevate." That's what happens when people hand AI the whole job.

In this lesson you'll learn the opposite approach: using AI as a sharp editor and writing partner. Your writing gets clearer and faster, and it still sounds like you.

2. Editor, not ghostwriter · 0:25

[ON SCREEN TEXT: "Editor, not ghostwriter"]

There are two ways to write with AI. The ghostwriter way is "Write a report about X." You get generic text that needs heavy rewriting and doesn't sound like you.

The editor way is different. You bring the ideas and a rough draft, and AI helps you structure, tighten and polish. It's faster overall and produces better writing, because the substance, the specifics and the voice all come from you.

Staring at a blank page? Don't ask for the finished piece. Ask for an outline built from your own thoughts, adjust it until it's right, then write each section yourself or draft it together one section at a time.

3. Demo: edit with specific instructions · 1:15

[ON SCREEN TEXT: "Specific instructions get useful edits"]

Once you have a draft, the key is being specific. "Improve this" gets random changes. Specific instructions get useful edits.

[SCREEN RECORDING] **Paste this prompt:**

```
Edit the text below for clarity and flow. Keep my voice and all of my
key points. Don't add new ideas or facts. Then list the 5 most
important changes you made and why, so I can learn from them.

[PASTE YOUR DRAFT]
```

I swap the bracket at the bottom for a short draft. Now look at the answer: an edited version, then a list of the most important changes and the reasons for each.

That list is the secret. It makes you a better writer over time, and it makes it easy to reject edits you disagree with.

The written lesson has more focused edits that work well. For example, "Cut this by 30 percent without losing any key points," or "Find anything vague or unsupported, and ask me for the specifics."

4. Keep your voice · 2:15

[ON SCREEN TEXT: "Show it your voice"]

AI has a default style. To override it, show it yours. Paste two samples of your writing, ask it to describe your style in five bullet points, then have it edit your draft to match.

Save that style description, because you can paste it into future prompts or your personal instructions. It also helps to ban the giveaways, so as a follow-up, I'll add this:

[SCREEN RECORDING] **Paste this prompt:**

```
Avoid buzzwords and filler such as "delve," "elevate," "unlock,"
"in today's fast-paced world" and "it's important to note."
Use short, concrete sentences.
```

Now compare the new version with the first one, and look for shorter sentences and fewer empty phrases.

5. Mistakes to avoid · 3:05

[ON CAMERA]

[ON SCREEN TEXT: "You're the author"]

A few mistakes to avoid. First, letting AI invent facts. Tell it, "Don't add facts I didn't give you," and then check anyway.

Second, accepting every edit. You're the author, so push back on changes that lose your meaning. And third, publishing the first draft, because AI drafts need a human pass for accuracy, voice and specifics.

One more thing: be honest about AI help. Some workplaces, schools and publications have specific rules about AI-assisted writing, so know what's expected. And when words are presented as personally yours, like a heartfelt letter, a personal statement or a reference, write the heart of it yourself.

6. Try it now · 3:50

[ON SCREEN TEXT: "Try it now: edit, then list the changes"]

Your turn. Take something you've written recently, like an email, a post or a section of a report, and run the "edit for clarity, then list your changes" prompt.

Accept the edits you agree with, reject the rest, and note one writing habit you learned. The prompt is in the written lesson.

7. Recap and what's next · 4:15

[ON SCREEN TEXT: "You bring the ideas. AI helps you polish."]

To recap. Use AI as an editor and partner, not a ghostwriter, so the ideas and the draft come from you. And when you're stuck, start with an outline built from your own thoughts.

Give specific editing instructions, and ask AI to explain its changes. Then protect your voice with samples, a style description and a list of banned phrases.

In the next lesson, Research and Summarize Documents You Can Trust, you'll learn to get accurate summaries of long documents and pull out what matters, without falling for made-up sources. See you there.

ON-SCREEN TEXT

- Write and Edit Better (Without Sounding Like a Robot)
- Editor, not ghostwriter
- Specific instructions get useful edits
- Show it your voice
- You're the author
- Try it now: edit, then list the changes
- You bring the ideas. AI helps you polish.

LESSON PAGE DESCRIPTION

Learn to write with AI as your editor, not your ghostwriter. You bring the ideas and a rough draft; AI helps you outline, tighten and polish, and explains its changes so you can keep the good ones and reject the rest. You'll also learn simple ways to keep your own voice and avoid the giveaway phrases that make writing sound like a robot.

Lesson 12: Research and Summarize Documents You Can Trust

Course	AI Essentials: Use AI in Everyday Life
Module	4 · AI for Work & Productivity
Length	4–5 min (~600 spoken words)
Format	Talking head + screen recording

Goal of this video: Get accurate, purpose-driven summaries of documents, back them with supporting quotes you can check, and research questions without falling for made-up sources.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Pick a document that's fine to show on screen, with nothing confidential or personal in it: a public article, some terms and conditions or a school newsletter. Keep the original open so you can spot-check a quote.
- Decide how you'll fill the brackets in the first prompt: who the summary is for, what you need to know, and the document itself.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Research and Summarize Documents You Can Trust"]

The 40-page report you're meant to read before Thursday. The meeting transcript nobody wants to go through. Three insurance quotes that use different words for the same thing.

Summarizing and comparing documents is one of AI's most practical superpowers. With the right technique, it's also one of the most reliable. In this lesson I'll show you that technique.

2. Why documents are a sweet spot · 0:25

[ON SCREEN TEXT: "Most reliable: text you provide"]

Remember the risk ladder from Module 1? AI is most reliable when it works from text you provide, and least reliable when it relies on memory.

When you paste or upload a document, the source is right in front of it. That doesn't make it perfect, but it makes it far more trustworthy, especially if you ask it to show its work.

3. Demo: a summary with a purpose · 0:50

[ON SCREEN TEXT: "Give every summary a purpose"]

"Summarize this" gets you a generic summary. A summary with a purpose gets you what you need. Here's the prompt from the written lesson.

[SCREEN RECORDING] **Paste this prompt:**

```
Summarize the document below for [WHO, E.G. "ME, A BUSY PARENT"].
I need to know [YOUR PURPOSE, E.G. "WHAT CHANGES FOR OUR FAMILY AND
WHAT WE NEED TO DO"].

Give me:
1. The 3-5 key points, in plain English
2. Anything I need to do, with deadlines
3. Anything surprising, unusual or easy to miss

[PASTE OR ATTACH THE DOCUMENT]
```

I fill in who it's for and what I need to know, then add the document at the bottom. Look at the structure: the key points in plain English, anything I need to do with deadlines, and anything easy to miss.

4. Ask it to show its evidence · 1:35

[ON SCREEN TEXT: "Ask for supporting quotes"]

Now for the single best habit for trustworthy summaries. Add this to any summary prompt, or send it as a follow-up.

[SCREEN RECORDING] **Paste this prompt:**

```
For each key point, include a short direct quote from the document that
supports it. If something isn't in the document, say "not in the
document" rather than guessing.
```

Now every key point comes with a short quote. Search for that quote in the original, and you can check any point in seconds. If a quote isn't there, you've caught a problem.

The same idea works when you compare quotes, offers or policies. Ask it to mark anything missing as "not stated." That stops it from filling gaps with assumptions, and shows you exactly what to ask about.

The written lesson has that comparison prompt too, plus one that pulls the decisions, action items and open questions out of meeting notes.

5. Research, sources and limits · 2:40

[ON CAMERA]

[ON SCREEN TEXT: "Open the sources"]

When there's no document and you're asking AI to find information, the risk goes up. Three habits help. First, if your assistant can search the web, ask it to for anything recent or specific, and to include links.

Second, open the sources. Check that each link works and actually says what the AI claims, and prefer original sources, like official sites or the original study. Third, ask for disagreement: "What do critics or experts who disagree say?"

The most common mistake here is treating cited sources as verified. Open them, every time it matters.

And know the limits. Very long documents can exceed what your assistant reads at once, so if it seems to miss later sections, summarize in parts. Scans and photos may be read imperfectly, so spot-check the numbers.

Finally, don't upload confidential work documents, or files full of personal data, unless your assistant's settings and your organization's policies allow it. When in doubt, remove sensitive details first.

6. Try it now · 3:45

[ON SCREEN TEXT: "Try it now: summarize, then spot-check"]

Pick a real document, like some terms and conditions, a school newsletter or a work report you're allowed to share. Use the purpose-driven summary prompt, plus the supporting-quote instruction.

Then spot-check two of the quotes against the original. Did they match? Finally, ask, "What questions does this document leave unanswered?"

7. Recap and what's next · 4:10

[ON SCREEN TEXT: "Purpose · Quotes · Not stated"]

To recap. AI is most reliable when it works from text you provide, so give every summary a purpose and a structure. Ask for supporting quotes and "not stated" markers so you can verify quickly.

And for open-ended research, use web search, open the sources and look for disagreement. Every prompt from this video is in the written lesson.

In the next lesson, Better Decisions and Brainstorming, you'll use AI as a thinking partner to come up with more ideas and weigh your options, while the final call stays yours. See you there.

ON-SCREEN TEXT

- Research and Summarize Documents You Can Trust
- Most reliable: text you provide
- Give every summary a purpose
- Ask for supporting quotes
- Open the sources
- Try it now: summarize, then spot-check
- Purpose · Quotes · Not stated

LESSON PAGE DESCRIPTION

AI is at its most reliable when it works from a document you give it. In this lesson you'll learn to ask for summaries with a clear purpose, back every key point with a supporting quote you can check in seconds, and mark gaps as "not stated." You'll also learn three habits for researching questions without falling for made-up sources.

Lesson 13: Better Decisions and Brainstorming

Course	AI Essentials: Use AI in Everyday Life
Module	4 · AI for Work & Productivity
Length	4–5 min (~590 spoken words)
Format	Talking head + screen recording

Goal of this video: Use AI as a thinking partner to brainstorm more ideas, untangle a decision with a weighted comparison, and spot blind spots, while keeping the final call yours.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Pick a sample goal for the brainstorm and fill the brackets with who it's for, your constraints, a budget and anything already ruled out.
- Pick a sample decision for the weighted comparison: two options and three or four criteria. The job-offer example from the written lesson (income, time with family, growth and stress) works well.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Better Decisions and Brainstorming"]

Some of the best uses of AI don't produce anything you'd send or publish. They produce better thinking.

Stuck for ideas? AI can give you twenty in a minute.

Torn between two options? It can help you see trade-offs you've been too close to notice.

In this lesson you'll learn to use AI as a thinking partner: creative, honest, and never the one making the decision.

2. Brainstorm: go wide, then narrow · 0:30

[ON SCREEN TEXT: "Diverge, then converge"]

Good brainstorming has two phases. First you diverge, with lots of ideas and no judging. Then you converge and pick the best.

AI is brilliant at the first and helpful with the second. Here's the prompt for going wide.

[SCREEN RECORDING] **Paste this prompt:**

```
I need ideas for [GOAL]. Context: [WHO IT'S FOR, CONSTRAINTS, BUDGET,
AND WHAT I'VE ALREADY TRIED OR RULED OUT].
Give me 20 ideas: some safe, some unusual, and a few that seem almost
too bold. One line each.
```

Notice that it asks for quantity. The first few ideas are usually the obvious ones, and the interesting ones come later in the list.

Then narrow it down. Ask for the five that best fit your constraints, each with its biggest advantage, its biggest risk and a cheap way to test it. You can also push the edges with "What would this look like with half the budget?"

3. Decide: the weighted comparison · 1:30

[ON SCREEN TEXT: "Structure beats agonizing"]

When you're stuck on a decision, it's often because the options are tangled up in your head. AI helps you untangle them.

[SCREEN RECORDING] **Paste this prompt:**

```
Help me decide between [OPTION A] and [OPTION B].
What matters most to me, in order: [CRITERIA, E.G. COST, COMMUTE,
GROWTH, FAMILY TIME].
Create a table scoring each option 1-5 on each criterion, with a
one-line reason for each score. Then tell me which option comes out
ahead, and what would have to be true for the other one to be better.
```

You get a table with a score and a reason for each criterion. But the powerful part is the last question, because it shows you which assumptions the decision really hinges on.

[ON CAMERA]

Picture a job offer with higher pay and a longer commute. The new job wins on income and growth, and your current job wins on family time. Then that last question reveals the decision hinges on whether you could work from home two days a week.

That's not a question for AI. It's a question for the hiring manager, and now you know exactly what to ask.

[OPTIONAL PERSONAL EXAMPLE: a decision you were stuck on, where laying out the trade-offs showed you what it really depended on.]

4. Find your blind spots · 2:35

[ON SCREEN TEXT: "Pre-mortem · Honest challenger"]

Two more tools are in the written lesson. The pre-mortem asks AI to imagine it's a year from now and your decision turned out to be a mistake. It gives you the likely reasons, and one thing you could do now to prevent each.

And because assistants tend to agree with you, use the honest challenger. Ask for the strongest honest case against what you're leaning toward, without softening it.

5. Mistakes to avoid · 3:05

[ON SCREEN TEXT: "AI structures. You decide."]

The most common mistake is asking, "What should I do?" You'll get a generic answer, so ask for structure, trade-offs and blind spots instead.

Another is leading the witness. "Isn't option A better?" invites agreement, so ask neutrally. And don't outsource the decision, because AI only knows what you value if you tell it.

Know when to stop, too. If you've done a comparison and a pre-mortem and still can't decide, the options may be genuinely close. Gather one more piece of real-world information, sleep on it, or talk it through with someone who knows you.

6. Try it now · 3:45

[ON SCREEN TEXT: "Try it now: compare, then pre-mortem"]

Pick a real decision you're weighing, big or small. Run the weighted comparison with your real criteria, then run the pre-mortem on your leading option.

Finally, write down the one question or fact the decision hinges on, and go and find the answer. Both prompts are in the written lesson.

7. Recap and what's next · 4:10

[ON SCREEN TEXT: "Go wide · Weigh it · Test it · You decide"]

To recap. Brainstorm in two phases: go wide, then narrow with clear criteria. A weighted comparison untangles your options and shows what the decision hinges on.

Run a pre-mortem, and ask for the strongest case against your favorite option. AI structures the thinking, and you make the call.

In the next lesson, Talk, Snap & Show: Voice and Image Features, you'll go beyond typing: talking through ideas hands-free, getting help with photos and creating images from a description. See you there.

ON-SCREEN TEXT

- Better Decisions and Brainstorming
- Diverge, then converge
- Structure beats agonizing
- Pre-mortem · Honest challenger
- AI structures. You decide.
- Try it now: compare, then pre-mortem
- Go wide · Weigh it · Test it · You decide

LESSON PAGE DESCRIPTION

Use AI as a thinking partner, not a decision-maker. In this lesson you'll brainstorm in two phases, untangle a tough choice with a weighted comparison that shows what the decision really hinges on, and use a pre-mortem and an honest challenger to surface blind spots. AI structures the thinking; you make the call.

Lesson 14: Talk, Snap & Show: Voice and Image Features

Course	AI Essentials: Use AI in Everyday Life
Module	4 · AI for Work & Productivity
Length	4–5 min (~580 spoken words)
Format	Talking head + screen recording

Goal of this video: Go beyond typing: use voice for brain dumps and rehearsals, ask clear questions about photos, and describe images you want created, while checking details and protecting privacy.

BEFORE YOU RECORD

- Open your AI assistant in a new chat, and check which voice and image features your assistant and plan offer.
- For the first demo, prepare a photo of a sample letter that's fine to show on screen, with names, addresses and account numbers covered or cropped out. Attach it in place of the first bracket and name the letter's topic in the second.
- Record the image-creation demo in an assistant that can create images. If yours can't, record that part in one that can.
- Optional B-roll: you talking to your phone while cooking or walking.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Talk, Snap & Show: Voice and Image Features"]

Typing isn't the only way to use AI anymore. Many assistants can listen and talk back, look at a photo you've taken, and even create images from a description.

That turns AI into something you can use while cooking, walking, or standing in front of a confusing parking sign.

Features vary between assistants and plans, and they change quickly, so check what yours offers. The techniques in this lesson work wherever the features are available.

2. Voice: think out loud · 0:30

[ON SCREEN TEXT: "Dictation · Voice conversation"]

There are usually two kinds of voice feature. Dictation types your words into the message box, which is great for long, rambling context. Voice conversation is a spoken back-and-forth, a bit like a phone call with your assistant.

[B-ROLL: talking to a phone while cooking]

Voice shines when your hands are busy or your thoughts are messy. Try a brain dump: talk for two minutes about everything on your mind, then say, "Turn that into an organized to-do list, grouped by priority."

You can also rehearse out loud. The written lesson has a spoken prompt where the AI plays your manager, pushes back a little, then tells you what you did well and what to improve.

3. Demo: AI that can see · 1:20

[ON SCREEN TEXT: "Photo + a clear question"]

Many assistants can also look at a photo, like your fridge, a confusing form, a screenshot of an error message or handwritten notes. A good image prompt still uses the five parts, so add context and a clear task.

Here I'm attaching a photo of a sample letter, with the personal details covered.

[SCREEN RECORDING] Paste this prompt:

```
[ATTACH PHOTO] This is a letter I received about [TOPIC]. In plain
English: what is it about, do I need to do anything, and by when?
Flag anything that looks unusual or like a possible scam.
```

Look at how the answer follows the task: what the letter is about, whether I need to act, by when, and anything that looks unusual.

4. Check what it read · 2:05

[ON CAMERA]

[ON SCREEN TEXT: "Check important details against the original"]

Now the most common mistake: assuming it read everything correctly. AI can misread blurry text, small numbers and handwriting. For anything important, like a medication label, a bill amount or a deadline, check against the original.

Identifying plants, mushrooms, insects or skin conditions from a photo is a starting point only. And never eat a wild plant or mushroom based on an AI identification.

5. Demo: creating images · 2:35

[ON SCREEN TEXT: "Subject · Style · Composition and mood · Use"]

Some assistants can also create images, like a party invitation or an illustration for a presentation. Describe four things: the subject, the style, the composition and mood, and how you'll use it.

[SCREEN RECORDING] Paste this prompt:

```
Create an image for a kids' science birthday party invitation: a
friendly cartoon rocket and planets, bright colors, playful style,
with empty space at the top for text. Square format.
```

All four parts are there. And notice the empty space at the top, because image generators can still struggle with exact wording. Add any text yourself in a design or document app.

6. Privacy and respect · 3:15

[ON CAMERA]

[ON SCREEN TEXT: "Crop first. Ask first."]

Photos can show more than you meant to share, like faces, addresses, license plates and paperwork in the background. So crop first.

Don't create images of real people in ways that could mislead or embarrass them. And ask before uploading other people's photos, because your friend's face isn't yours to share.

7. Try it now · 3:40

[ON SCREEN TEXT: "Try it now: snap, ask, talk"]

Take a photo of something real, like your fridge, a sign, or a confusing piece of mail with personal details covered. Ask a specific question about it, with context and a clear task.

If your assistant has voice, try a two-minute spoken brain dump and ask it to organize your thoughts. The steps are in the written lesson.

8. Recap and what's next · 4:05

[ON SCREEN TEXT: "Talk it through · Snap and ask · Check the details"]

To recap. Voice is perfect for brain dumps, rehearsals and hands-free help. A photo plus a clear question makes forms, letters, labels and screenshots easy to understand.

Check anything important against the original, and never rely on AI to tell you what's safe to eat. Crop out sensitive details, and never create misleading images of real people.

In the next lesson, Fact-Check AI in Three Minutes, you'll learn a simple, repeatable routine to catch AI mistakes before they cost you. See you there.

ON-SCREEN TEXT

- Talk, Snap & Show: Voice and Image Features
- Dictation · Voice conversation
- Photo + a clear question
- Check important details against the original
- Subject · Style · Composition and mood · Use
- Crop first. Ask first.
- Try it now: snap, ask, talk
- Talk it through · Snap and ask · Check the details

LESSON PAGE DESCRIPTION

AI isn't just for typing anymore. In this lesson you'll use voice for brain dumps and rehearsals, get plain-English help with photos of letters, forms and screenshots, and describe images you want created. You'll also learn why to check important details against the original, and how to protect your privacy and other people's.

Lesson 15: Fact-Check AI in Three Minutes

Course	AI Essentials: Use AI in Everyday Life
Module	5 · Make It a Habit
Length	4–5 min (~590 spoken words)
Format	Talking head + screen recording

Goal of this video: Run a fast, four-step fact-check that matches your effort to the stakes and catches AI mistakes before they cost you.

BEFORE YOU RECORD

- Open your AI assistant in a new chat and ask it a factual question first, such as how a rule works where you live or a health guideline, so there's an answer on screen for the demo.
- Have one official or original source open in another tab, so you can show checking a claim against it.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Fact-Check AI in Three Minutes"]

You know AI can be confidently wrong. But you can't verify every sentence, or AI would stop saving you time.

The answer is a fast, focused routine: check the right things, in the right way, in about three minutes. Use it whenever an answer will inform a decision, go out under your name, or cost money.

2. Step 1: does it need checking? · 0:25

[ON SCREEN TEXT: "What happens if this is wrong?"]

Step one takes ten seconds. Ask yourself one question: "What happens if this is wrong?"

For low stakes, like a brainstorm or a draft you'll edit, a quick read-through is enough. For medium stakes, like an email with facts in it or a plan you'll follow, check the key claims.

And for high stakes, like health, legal, money, safety or anything published, check every specific claim and consider a professional.

3. Step 2: spot the checkable claims · 0:55

[ON SCREEN TEXT: "Errors hide in specifics"]

Step two takes about thirty seconds. Errors hide in specifics: names, numbers, dates, quotes, rules, links, citations, and anything that surprised you.

You can scan for those yourself, or let the AI do the scanning. I've already asked a factual question, so here's the follow-up.

[SCREEN RECORDING] **Paste this prompt:**

```
List every specific factual claim in your last answer: names, numbers,
dates, quotes, sources and rules. For each one, tell me how confident
you are (high, medium or low) and the best type of source to verify it.
```

Now there's a list of claims, each with a confidence level and the best type of source to check it. That tells you where to spend your next two minutes.

4. Step 3: verify the important ones · 1:40

[ON SCREEN TEXT: "Go to the source"]

Step three is two minutes of real checking. Go to the source, because official websites beat blogs and forums, and the original study beats news coverage of it.

Open every link and make sure it says what the AI claimed. Search for the exact quote or title, and if you can't find it anywhere, treat it as invented. Redo important math, and check the date, because prices and rules change fast.

A handy technique here is lateral reading. Instead of studying one source closely, open a few others in new tabs and see what they say about the same claim. If reliable sources agree, you're in good shape.

5. Step 4: let AI help check itself · 2:25

[ON SCREEN TEXT: "Self-checks find problems. Sources settle them."]

Step four: let AI help check itself, carefully. These prompts help surface problems, but they don't replace real sources.

[SCREEN RECORDING] Paste this prompt:

```
Argue against your own answer. What would a skeptical expert say?
```

You can also get a second opinion. Paste the claim into a different assistant or a fresh chat and ask, "Is this accurate? What's the evidence?"

If the answers disagree, you know exactly where to dig.

6. The mistake and the red flags · 3:05

[ON CAMERA]

[ON SCREEN TEXT: "Check a real source, not just the AI"]

The most common mistake is asking, "Are you sure?" and stopping there. The AI might double down on a mistake, or back down when it was right. Check a real source.

And slow down when you see red flags. Watch for very precise statistics with no source, quotes that are a little too perfect, and citations you can't find.

Be just as careful with information that only confirms what you hoped, and with confident answers about very recent events.

7. Try it now · 3:40

[ON SCREEN TEXT: "Try it now: check two claims"]

Ask your assistant a factual question you're genuinely curious about, like a historical event, a health guideline or how a rule works where you live. Then use the "list every specific factual claim" prompt.

Verify the two most important claims using official or original sources. Then note what you found: all correct, partly outdated, or wrong? The steps are in the written lesson.

8. Recap and what's next · 4:05

[ON SCREEN TEXT: "Stakes · Specifics · Sources"]

To recap. Match your checking effort to the stakes by asking what happens if this is wrong. Errors hide in specifics: names, numbers, dates, quotes, links and rules.

Verify with official and original sources, open every link, and redo important math. AI self-checks and second opinions help you find problems, but real sources settle them.

In the next lesson, Safety, Ethics & What Never to Share, you'll learn to protect your privacy, spot AI-powered scams, and use AI honestly and fairly. See you there.

ON-SCREEN TEXT

- Fact-Check AI in Three Minutes
- What happens if this is wrong?
- Errors hide in specifics
- Go to the source
- Self-checks find problems. Sources settle them.
- Check a real source, not just the AI
- Try it now: check two claims
- Stakes · Specifics · Sources

LESSON PAGE DESCRIPTION

You can't verify every sentence, but you can check the right things in about three minutes. This lesson gives you a four-step routine: decide what's at stake, spot the checkable claims, verify the important ones with official and original sources, and use AI self-checks and second opinions to find problems fast.

Lesson 16: Safety, Ethics & What Never to Share

Course	AI Essentials: Use AI in Everyday Life
Module	5 · Make It a Habit
Length	4–5 min (~670 spoken words)
Format	Talking head + screen recording

Goal of this video: Know what never to paste into an AI assistant, recognize AI-powered scams and verify them safely, and use AI honestly and accountably.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Write a short, made-up sample scam text to paste in place of the bracket, with typical red flags: urgency, secrecy, a request to pay by gift card and a "verify your account" link. Use no real names, numbers, companies or working links.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Safety, Ethics & What Never to Share"]

AI is a powerful tool, and like any powerful tool, it comes with a few rules worth knowing by heart.

This lesson covers three things: protecting your information, protecting yourself from people who use AI against you, and using AI in a way you'd be comfortable explaining to anyone.

2. What never to share · 0:20

[ON SCREEN TEXT: "Never paste passwords, financial or ID numbers, health records or confidential data"]

You learned the postcard rule in Module 1. Here's the complete list: never paste passwords, PINs, security codes or recovery codes. Never paste full card numbers, bank details or government ID numbers.

The same goes for medical record numbers, insurance policy numbers and detailed health records tied to your name. Don't paste other people's private information either. And keep confidential work material out, unless your employer has approved the tool for it.

Before you paste anything, pause and ask three questions.

Would I be comfortable if a stranger read this? Does it identify me or someone else? Could I describe it instead of pasting it?

You can almost always get the same help by swapping specifics for descriptions: "my client" instead of a name, "a mid-sized city" instead of an address, and rounded numbers instead of exact balances.

3. Scams just got smarter · 1:20

[ON SCREEN TEXT: "Agree on a family code word"]

Scammers use AI too, and their messages are now well written, personalized and convincing. Here are three threats to know.

First, voice cloning. Scammers can imitate someone's voice from a short recording, so a panicked call from a "grandchild" or "boss" asking for urgent money could be fake. Agree on a family code word, and if a call feels urgent and unusual, hang up and call back on a number you already know.

Second, deepfake images and video. Be skeptical of shocking content, especially when it pushes you to act or share right away.

Third, polished phishing. Bad spelling used to be a giveaway, but not anymore. Judge a message by what it asks for: urgency, secrecy, payment by gift card, wire transfer or crypto, or a link to "verify your account."

4. Demo: check a suspicious message · 2:15

AI can help you spot scams, too. I'll use a made-up sample message with no personal details in it.

[SCREEN RECORDING] **Paste this prompt:**

```
I received this message and I'm not sure it's legitimate. I haven't
clicked anything. [PASTE THE TEXT, WITHOUT PERSONAL DETAILS]
What are the warning signs, if any? How can I verify it safely without
using any of the contact details in the message?
```

The answer walks through the warning signs and safe ways to check. Then verify through official contact details you look up yourself, never the ones in the message.

5. Using AI ethically · 2:50

[ON CAMERA]

[ON SCREEN TEXT: "If you send it, you own it"]

Now, using AI ethically. Be honest about AI help when it matters, and follow any rules your school, employer, clients or publisher have. And stay accountable, because if you send it, you own it.

Watch for bias, especially when AI output affects people, like hiring, reviews or descriptions of others. Respect creators, and never use AI to impersonate a real person or to create fake reviews, fake documents or misleading images.

Keep your own skills sharp, too, and remember that AI isn't a therapist or a friend. It can be a helpful sounding board on a hard day, but it's no substitute for real people or professional support. If you're struggling, reach out to someone you trust or a mental health professional, and in a crisis, contact your local emergency number or a crisis line.

6. Try it now · 3:50

[ON SCREEN TEXT: "Try it now: settings · code word · your three rules"]

Three quick tasks. Revisit your assistant's training, memory and history settings, and agree on a code word with your family or closest people. Then write your own three-line AI rules: what you'll never share, when you'll mention AI help, and what you'll always verify.

One common mistake to avoid while you're in those settings: assuming deleted means gone everywhere. Deleting a chat removes it from your history, but retention policies vary, so don't share what you'd regret.

7. Recap and what's next · 4:25

[ON SCREEN TEXT: "Describe, don't paste · Verify through trusted channels · Own what you send"]

To recap. Never share passwords, financial or ID numbers, health records or confidential data, and describe instead of pasting. Scams now use cloned voices, deepfakes and polished messages, so verify through channels you already trust.

Be honest about AI help when it matters, and stay accountable for anything you send. Use AI to support your thinking and your relationships, not to replace them.

In the next lesson, Build Your Personal AI Toolkit, you'll pull everything together into a simple personal system that makes using AI well your everyday default. See you there.

ON-SCREEN TEXT

- Safety, Ethics & What Never to Share
- Never paste passwords, financial or ID numbers, health records or confidential data
- Agree on a family code word
- If you send it, you own it
- Try it now: settings · code word · your three rules
- Describe, don't paste · Verify through trusted channels · Own what you send

---

LESSON PAGE DESCRIPTION

A few rules keep you safe with AI. In this lesson you'll learn exactly what never to paste into an assistant, how scammers now use cloned voices, deepfakes and polished phishing, and how to check a suspicious message safely. You'll also learn simple principles for using AI honestly and fairly at home, at school and at work.

Lesson 17: Build Your Personal AI Toolkit

Course	AI Essentials: Use AI in Everyday Life
Module	5 · Make It a Habit
Length	4–5 min (~590 spoken words)
Format	Talking head + screen recording

Goal of this video: Pull the course together into a simple personal toolkit: your assistant, your instructions, a saved prompt library, your workspaces and your safety routine.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- For the first demo, prepare a short sample "typical week" to fill the bracket: a few work, home and recurring tasks, plus something you dread.
- For the second demo, pick any prompt from this course (the edit-for-clarity prompt works well) and a sample of what you'd usually have to fix in its answers.
- Optional B-roll: a notes app showing a note titled "My AI Prompts".

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Build Your Personal AI Toolkit"]

You've learned a lot of techniques. The risk now is the same as with any course: you finish, feel inspired for a week, then slowly drift back to old habits.

The fix is to turn what you've learned into a small personal toolkit. That's a few things set up and saved, so using AI well becomes the easy default.

2. The five parts of your toolkit · 0:25

[ON SCREEN TEXT: "Assistant · Instructions · Prompt library · Workspaces · Safety routine"]

Your toolkit has five parts. First, your assistant: one main assistant you know well, plus a second for second opinions if you like. Second, your personal instructions, the short "about me and how I like answers" text from Module 2.

Third, your prompt library: eight to twelve saved prompts for the things you do most. Fourth, your workspaces, one for each ongoing area of life or work, if your assistant supports them. And fifth, your safety routine: what you never share, and your three-minute fact-check.

3. Demo: find your best uses · 1:00

[ON SCREEN TEXT: "Language-heavy? Would a draft help? Can I check it?"]

Not everything needs AI. The best candidates pass three tests: is it language-heavy, would a good first draft help, and can I check the result? Let AI help you find them.

[SCREEN RECORDING] **Paste this prompt:**

```
Help me find my best uses for AI. Here's a typical week for me:
[WORK, HOME, ROUTINES, RECURRING TASKS AND THINGS I DREAD].
Identify the 5 tasks where AI could save me the most time or stress.
For each, explain how, and give me a ready-to-use prompt template with
[BRACKETS] for the details that change each time.
```

With a sample week filled in, you get five tasks, each with an explanation and a template ready to save. Pick your top three.

4. Build your prompt library · 1:40

[B-ROLL: a notes app with a "My AI Prompts" note]

Now save them in a "My AI Prompts" note. A good entry has a clear name, like "Weekly plan" or "Reply helper," so you can find it fast. Then comes the prompt itself, with brackets for anything that changes, and a note on any follow-up that usually helps.

The written lesson has a starter library drawn from this whole course, from appointment prep to the pre-mortem. Pick the ones that fit your life.

And keep it short. The most common mistake is collecting prompts you never use, and a short library you use beats a huge one you don't.

5. Demo: make your templates better · 2:25

When you notice you're fixing the same thing every time, improve the prompt. AI can help with that, too.

[SCREEN RECORDING] **Paste this prompt:**

```
Here's a prompt I use regularly: [PASTE PROMPT]. Here's what I usually
have to fix in the answers: [ISSUES]. Improve the prompt so I get better
results the first time. Keep it short and keep the [BRACKETS].
```

The goal is a prompt that gets it right the first time, with the brackets still in place so you can reuse it.

6. Remove the friction · 2:55

[ON CAMERA]

[ON SCREEN TEXT: "Context in. Check specifics. Never paste passwords."]

Small setup choices decide whether you actually use AI day to day. Pin your assistant to your phone's home screen and your browser's bookmarks bar, and keep your prompt library one tap away in the notes app you already open every day. Use dictation when typing out context feels like a chore.

Picture a freelance designer with two kids. Their toolkit is one main assistant, short personal instructions, nine saved prompts, one workspace for the biggest client project, and a sticky note on the monitor.

The note says, "Context in. Check specifics. Never paste passwords."

That's simple enough to use daily, and powerful enough to save real time every week. And don't chase every new tool, because mastering one assistant beats dabbling in five.

7. Try it now · 3:50

[ON SCREEN TEXT: "Try it now: build your toolkit"]

Run the "find my best uses" prompt and pick your top three. Then create or update your "My AI Prompts" note with at least eight prompts.

Review and refresh your personal instructions. Finally, write a one-line rule for safe use, and put it somewhere you'll see it.

8. Recap and what's next · 4:10

[ON SCREEN TEXT: "Five parts · Saved prompts · Less friction"]

To recap. Your toolkit has five parts: assistant, personal instructions, prompt library, workspaces and safety routine. Focus AI on tasks that are language-heavy, benefit from a draft, and that you can check.

Save prompts with brackets and keep improving them. And remove friction, so using AI well becomes your default.

In the next lesson, Your 30-Day AI Habit Plan, you'll turn this toolkit into a lasting habit, in about ten minutes a day. See you there.

ON-SCREEN TEXT

- Build Your Personal AI Toolkit
- Assistant · Instructions · Prompt library · Workspaces · Safety routine
- Language-heavy? Would a draft help? Can I check it?
- Context in. Check specifics. Never paste passwords.
- Try it now: build your toolkit
- Five parts · Saved prompts · Less friction

LESSON PAGE DESCRIPTION

Turn everything you've learned into a small personal system you'll actually use. In this lesson you'll set up the five parts of your AI toolkit, find your highest-value uses, build a saved prompt library and keep improving it, and remove the friction that stops good habits from sticking.

Lesson 18: Your 30-Day AI Habit Plan

Course	AI Essentials: Use AI in Everyday Life
Module	5 · Make It a Habit
Length	4–5 min (~630 spoken words)
Format	Talking head + screen recording

Goal of this video: Start a simple four-week plan, about ten minutes a day, that turns everything from the course into a lasting AI habit.

BEFORE YOU RECORD

- Open your AI assistant in a new chat.
- Prepare a short sample log to paste in place of the bracket: a handful of made-up rows with a date, a task, the time saved and one lesson learned. You say on camera that it's a sample.
- Optional B-roll: a notes app with a four-column log, or a calendar reminder for Day 30.

SCRIPT

1. Hook · 0:00

[ON CAMERA]

[ON SCREEN TEXT: "Your 30-Day AI Habit Plan"]

Knowing how to use AI and actually using it are two different things. The people who get the most from AI aren't necessarily the most technical. They're the ones who made it a habit.

This final lesson gives you a 30-day plan to do exactly that, in about ten minutes a day.

2. How to make it stick · 0:20

[ON SCREEN TEXT: "Attach it · Start small · Make progress visible"]

Three principles make this plan work. First, attach it to something you already do, like "After my morning coffee, I'll use AI for one task." An existing routine is the best trigger for a new one.

Second, start small: ten minutes and one task, because small wins build momentum. Third, make progress visible with a simple log of the date, the task, a rough guess at the time saved, and one thing you learned.

3. The four weeks · 0:55

[ON SCREEN TEXT: "Week 1: daily wins · Week 2: your system · Week 3: go deeper · Week 4: refine"]

Week one is about daily wins: use AI once a day for something real. Draft a message you've been putting off, plan tomorrow from a brain dump, summarize a long article, and on day seven, review your log.

Week two builds your system. Refine your personal instructions, save your five most useful prompts as templates, set up a workspace, try voice or images, and run the three-minute fact-check.

In week three, you go deeper. Pick one meaningful project, like planning a trip or learning a new skill, and spend ten minutes a day moving it forward. Each day, try a technique you haven't used yet, like the Socratic tutor, a pre-mortem or a weighted comparison.

Week four is for refining. Improve your three most-used templates, try AI in a new area of your life, teach someone else one thing you've learned, and review your privacy settings and never-share rules.

4. Demo: your Day 30 reflection · 2:00

Then on day 30, you reflect. Here's the prompt, and I'm using a short sample log.

[SCREEN RECORDING] **Paste this prompt:**

```
Here's my log from 30 days of using AI: [PASTE YOUR LOG]
Help me reflect: which uses saved me the most time or stress, which
didn't help, and what patterns do you notice? Then suggest 3 new ways
to use AI next month, based on what has worked for me, each with a
prompt template.
```

It sorts out what helped and what didn't, spots the patterns, and suggests three new ways to use AI, each with a template. That's your plan for next month.

5. When you miss a day · 2:30

[ON CAMERA]

[ON SCREEN TEXT: "A missed day is a pause, not a failure"]

You will miss a day, and that's fine. Don't restart the plan; just pick up where you left off. Missing a day doesn't break a habit, but quitting does.

If ten minutes feels like too much on a busy day, do a two-minute version: one message, or one quick question. And don't wait for the perfect use case, because small everyday tasks build the habit.

AI tools change fast, but you don't need to chase every announcement. Giving context, iterating, verifying and protecting your privacy work with any assistant, today and in the years ahead. When a new feature appears, ask your assistant to explain it, then try it on one real task.

6. Try it now · 3:20

[ON SCREEN TEXT: "Try it now: do Day 1 today"]

Choose your trigger, like "After my morning coffee, I'll use AI for one task." Then create your log with four columns: date, task, time saved and lesson learned.

Put a reminder in your calendar for Day 30. And then do Day 1 today.

7. Recap and congratulations · 3:40

To recap: tie AI to an existing routine, start with ten minutes a day, and log your wins. Missed days don't matter much, but consistency over time does.

[ON SCREEN TEXT: "You did it"]

Congratulations on finishing AI Essentials! Think about how far you've come.

You started by learning what AI really is and why it sometimes makes things up. Then you learned the five-part prompt, how to iterate, and how to give AI your context. You've used it for messages, planning, learning, serious questions, writing, research and decisions.

And you've built the habits that keep you safe: fact-checking, protecting your privacy and spotting scams. You now have the skills, the toolkit and a plan to make AI genuinely useful in your everyday life. So keep your toolkit close.

[OPTIONAL PERSONAL EXAMPLE: a short, genuine word about what you hope learners take from the course, or how an everyday AI habit has helped you.]

When you're ready for the next step, whether that's AI for your business or hands-on help, take a look at our other courses. Thank you for learning with me, and enjoy Day 1.

ON-SCREEN TEXT

- Your 30-Day AI Habit Plan
- Attach it · Start small · Make progress visible
- Week 1: daily wins · Week 2: your system · Week 3: go deeper · Week 4: refine
- A missed day is a pause, not a failure
- Try it now: do Day 1 today
- You did it

LESSON PAGE DESCRIPTION

Knowing how to use AI and actually using it are two different things. This final lesson gives you a simple four-week plan, about ten minutes a day, to turn everything you've learned into a lasting habit: daily wins, then your system, then a deeper project, then refining what works. It ends with a reflection prompt to plan your next month.
